

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

ServiceNow Micro-Project

PHASE 8 | PROJECT DEMONSTRATION PHASE

8. Project Demonstration Phase

This phase provides a structured walkthrough for presenting the completed automation to reviewers or stakeholders, tying every configuration step back to a visible, verifiable output screen.

8.1 Demonstration Agenda

#	Segment	Duration
1	Problem statement & objective recap	2 min
2	Walkthrough of the Flow (trigger + action + field mapping)	4 min
3	Walkthrough of the Process Engine binding on the catalog item	2 min
4	Live demo: place order → approve → verify Catalog Task	6 min
5	Q&A	3 min

8.2 Demo Script — Step by Step

1. **Set the context:** "Standard Laptop orders currently need someone to manually create and assign a configuration task after approval — this project automates that step entirely."
2. **Show the Flow:** Open Flow Designer → "Standard Laptop task" → show the Service Catalog trigger and the Create Catalog Task action with its field mapping.
3. **Show the binding:** Open Maintain Items → Standard Laptop → Process Engine tab → show Flow = "Standard Laptop task".
4. **Place a live order:** Service Catalog → Hardware → Standard Laptop → Order Now → show the generated Request Number.
5. **Approve the request:** Open the Request → Approvers related list → right-click → Approve.
6. **Verify the result:** Open the Requested Item → Catalog Tasks related list → open the new task and show every field was auto-filled correctly.
7. **Close with the outcome statement** (Section 8.5).

8.3 Key Output Screens Presented During the Demo

8.4 Anticipated Questions & Answers

Question	Answer
Why use Flow Designer instead of the classic Workflow editor?	Flow Designer is ServiceNow's current low-code automation tool, purpose-built for catalog fulfillment, easier to maintain visually, and the strategic direction for the platform going forward.
What happens if the request is rejected instead of approved?	The flow is scoped to the Service Catalog trigger on request creation and populates Approval = Approved on the task once triggered; a rejected request simply never reaches the point where the Hardware team needs a task, so no unnecessary task is created for that path in this design.
Can this be reused for other standard catalog items?	Yes — the same pattern (Service Catalog trigger + Create Catalog Task action with static field values) can be cloned and re-pointed at any other standard, pre-configured item.
Does the Hardware team need to do anything differently?	No — they still work Catalog Tasks from their normal assignment group queue; the only change is that the task now appears automatically and pre-filled, instead of being created manually.

8.5 Closing / Outcome Statement

"By automating the standard laptop procurement process with ServiceNow's Flow Designer, this project effectively addresses inefficiencies and reduces manual overhead. The streamlined workflow ensures timely configuration of laptops, minimizes user wait times, and enhances overall productivity within the IT department — optimizing resource allocation while delivering a seamless, efficient procurement experience."
